Customer Cohort Retention by Signup Month

Key Insights

1. The business has a **22% customer churn rate**, with 110 out of 500 customers no longer active.
2. Customer churn showed an **upward trend during 2024**, indicating increasing retention challenges.
3. **Missing features, budget limitations, and support-related concerns** are the most common reasons customers leave.
4. **Pro and Basic plans account for the highest number of churned customers**, while Enterprise customers show comparatively better retention.
5. Churn levels vary across different **industries**, suggesting that some customer segments are more likely to leave than others.
6. Cohort analysis shows that **retention performance differs across signup periods**, indicating that customer behavior varies by acquisition cohort.

Recommendations

1. Prioritize the development of frequently requested features to address the leading cause of churn.
2. Introduce flexible pricing plans, discounts, or loyalty programs for customers affected by budget constraints.
3. Improve customer support responsiveness and engagement to reduce preventable customer loss.
4. Implement proactive retention campaigns for customers on Basic and Pro plans before renewal periods.
5. Develop targeted retention strategies for industries exhibiting higher churn rates.
6. Regularly monitor customer cohorts and churn trends to identify at-risk customers early and improve long-term retention.
